Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Both [1] and [2] present the opposite strand from the one presented here. The focus of both papers is the method of replication of the virus. [1] notes that the initial tt is present only 30% of the time; it is shortened to t in 50% of the population and missing altogether in 15% of the population. There is further sequence heterogeneity which can be explained by assuming that the terminal 125 bases, which form an imperfect palindrome, are replaced by their inverted complement during replication. [2] found that deletion of the 9 terminal bases on the right and the 113 terminal bases on the left of AAV 2 genome did not stop DNA replication. Further deletion of either an 11-base symmetrical sequence (bases 89 to 99) in the right terminal repetition inhibits DNA replication. Substitution of either an 8-base (cagactorgo) symmetrical sequence unrelated to the original 11-base sequence restores DNA replication. All of this can be explained by assuming that the 125 base palindrome mentioned above form a t-shaped secondary structure which provides a primer for DNA polymerase during replication.
                                                                VRL 27-APR-1993
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          9

Original Source text: Adeno-associated virus 2H DNA (clone pSM620 [2]), from KB or HeLa cells.

The focus of both papers is the method of replication of the virus. The focus of both papers is the method of replication of the time; it is shortened to tin 50% of the population and missing altogether in 15% of the population and missing altogether which can be explained by assuming that the terminal 125 bases, which form an imperfect pallindrome, are replaced by their inverted complement during replication. [2] found that deletion of the 9 complement during replication. [2] found that deletion of the 9 complement during replication. Purcher deletion of an 11-base symmetrical sequence (bases 89 to 99) in the right terminal repetition inhibits DNA replication. Purcher deletion of either an 8-base (cagatots) or 12-base (cagatots) symmetrical sequence unrelated to the original 11-base sequence restores DNA replication. All of this can be explained by assuming that the 125 base palindrome mentioned above form a t-shaped secondary structure which provides a primer for DNA polymerase during replication.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Adeno-associated virus origin of replication (genome 3' terminus). /note="Vector: Lambda Uni_ZAP XR, excised not boly(A) RNA were prepared (Butler, Ross and Gistafson) at University of Missouri, Columbia. A cDNA library was made, and the CDNA clones were in vivo excised to give pBluescript phagemids in the TJ Close lab (Choi, Close, Fenton) at the University of California, Riverside.
Plasmid DNA preparations and DNA sequencing were performed in the OD Anderson lab (all other authors)."

(<http://depts.washington.edu/ventures/collabtr/direct/index.htm>#brt). Overall sequence quality assessment and vector trimming were conducted using the Lucy software (<http://www.tigr.org/softlab/>). Lucy parameters were set to ensure an overall trimmed quality of 97.5% or better without any vector fragments in the chosen high-quality region of each sequence. Low-quality bases between the poly-T and the high-quality region were replaced with N's to serve
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      /tissue type="FIACENTA"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                resulting DNA:RNA hybrid was treated with RNAse H and used as a template for DNA Poll-catalyzed second strand synthesis. After the addition of EcoRI adaptors, the ds-cDNAs were digested with NotI and size-selected. The resulting molecules were directionally cloned into the EcoRI and NotI sites of the pT713PAC vector. The library then went through one round of normalization to CoT value of 5 based on the methods of Marcelo Bento Soares (Genome Research 6: 791-806, 1996)."

/clone_Tist strand cDNA was primed with a NotI-oligo(dT)
primer. Five prime end enriched, double strand cDNA was
digested with Not I and cloned into the Not I and EcoR V
sites of the pCMVSPORT 6 vector. Library was normalized.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    GCGCGCTCGCTCACTCACTCACCGGCCGCAAAGGTCGCCCGACGCCCGGGCTTTGC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           8
                                                                                                                                                                                                                                /done="trakonisas" / done="trakonisas" / done="vector: pkkw2: Site_1: BamHI; Site_2: XhoI; 10 ug / note="vector: pkkw2: Site_1: BamHI; Site_2: XhoI; 10 ug of poly4+ RNA was isolated from a mixture of embryos at stage 10. 20 and primed by oligo-dr primer: S-GAGAGAGGAAGGATCC(T)16VN-3' (where v=g,h,C).
5-methyl-dcTP was used instead of dcTP in the first-strand synthesis in order to get heminmethylated cDNA. After full:length enrichment, oligo-dg tailing and normalization against itself; second-strand synthesis was carried out by priming with 5'-GAGAGAGAGACTGGAGTAATTAATC(3)3-3' dsDNA was digested with XhoI/BamHI and directionally cloned into the pkkw2 vector. Average insert size is 1:8 b. Library constructed using the Carninci protocol (Genome Research 2000) by Drs. W. Wu and C. Niehrs (DKFZ, Heidelberg,

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                              US-10-620-039-1
